

CELLULAR SITE REDEVELOPMENT

The **Swann Group** of companies has all the capabilities in house to undertake every aspect of site redevelopment work.

The photographs show a typical site where the scope of work involved:

Structural Design was undertaken by **Swann Consulting Group**. This included pile cap design as well as detailed structural steel design of the monopole itself and checking of the pile design.

Fabrication of the 20m, 3 operator site share monopole was carried out in **Swann Engineering Group's** factory at Braintree using their 700T capacity, 7m bed, folding press.

Project management and installation work was carried out by **Swann Services Group** and included: piling using a specialist sub contractor with all other works such as liaising with residents, traffic management measures, site clearance, fencing, ducting, foundations, electrical work, dismantling, waste management, erection, rigging of new antennas and feeders and testing to the operators' specifications being carried out using our own staff.
