

Golf club safety netting

Towermaster, working along side '**Sportsafe UK Ltd** recently carried out a project at Poulwood Golf Club - Tonbridge. This was a joint venture between the Golf club & Tonbridge & Malling Borough Council, their requirement was for 250m of netting up to 15m high, for a new golf driving range.

Extent of supply was for design, civils, supply and installation of the support structures for the netting. After obtaining planning approval, the foundations were cast, and due to the location and site condition, the column adopted was from our Static '**Litescan**' Range.

This particular structure is economical and can be built by hand using a derrick pole. Selection of this particular structure has future proofed the project, by allowing the Club to Floodlight the Range at a later date.

Upon installation of the Structures, the project was completed by **Sportsafe UK**, who installed the netting system.

Poulwood Golf Range is a complete success and shows our commitment to supplying a quality services on every project.

'This was the first major project I have completed for the council and it was important to me for it to run smoothly. Thanks to Sportsafe and Towermaster, my task did run smoothly, so thank you'

Michael Harris

Outdoor leisure Services Officer

For Tonbridge and Malling Borough Council.
