

Planned Preventative Maintenance

Swann Services Group are commissioned to provide Planned Preventative Maintenance (PPM) services in support of a major Facilities Management supplier covering the T-Mobile and Vodafone cellular estate of cell and switch sites in the United Kingdom.

The requirement is for routine Planned Maintenance Inspection at Cellular Radio Base Stations of around 8,700 sites per year. Dedicated two-man teams operate on a regional basis, each typically carrying out PPM's on approximately 20-25 sites per week. The sites range from Rooftop installations, Towers, Monopoles, Fire Drill towers, Street-works and specialised installations such petrol forecourts that need specialist training for safe access.

Tasks carried out during the inspections visits consist of full structural survey of the antenna support structures, their interface with foundations or building, Safe access systems including ladders & installed fall-arrest systems, the antennas, feeder cables, associated ancillaries, site security and fixed safety anchor points.

The contract is managed by Swann Services team based in our Tonbridge office.
